

Global Multi-cloud Access

Fast, flexible, global connectivity
with our Elastic Connection Platform (ECP)

中国电信（欧洲）有限公司
China Telecom (Europe) Ltd.

Is your business ready for cloud migration?

Digitisation has become critical for companies going global. It promises more frequent innovation, better cost efficiency and faster time-to-market. In order to stay relevant organisations have deployed technologies from multiple providers. But to realise these goals and technologies businesses must reorganise and realign their existing infrastructure.

That's why cloud migration has become a strategic focus for forward-looking businesses. Many are currently in the planning phase of modernising their IT infrastructure, moving it into multiple clouds to make them more agile.

Future-proof your business with Global Multi-cloud Access solution

China Telecom Europe Ltd. (CTE)'s Global Multi-cloud access is a cross-border connection service that uses multiple cloud vendors to support enterprises. Our Global Multi-cloud Access is secure and reliable cloud-to-cloud. It offers data centre to cloud transmission service with dedicated layer 2 or layer 3 connectivity.

Using China Telecom's cloud service provider API and SDN-based transmission backbone network, our Global Multi-cloud Access solution is a pre-provisioned service. Your organisation can monitor, configure, and manage your processes using our Self-Service Portal.

Why choose CTE Global Multi-cloud Access?

Proven global connectivity

Connect to the clouds of leading providers in China and around the world. Our Global Multi-cloud Access solution is optimized for direct, multi-cloud connectivity with global coverage, using China Telecom's capabilities in the Chinese market. Simplify your business processes when you're planning cloud migration with Chinese subsidiaries or looking to enter the Chinese market.

Fast Delivery

Establish connectivity to cloud services quickly, between cloud nodes inside and outside China, by leveraging the APIs of cloud partners and our SDN. With CTE's service you get connection times of 1 working day cloud to cloud and 3-7 working days cloud to data centre.

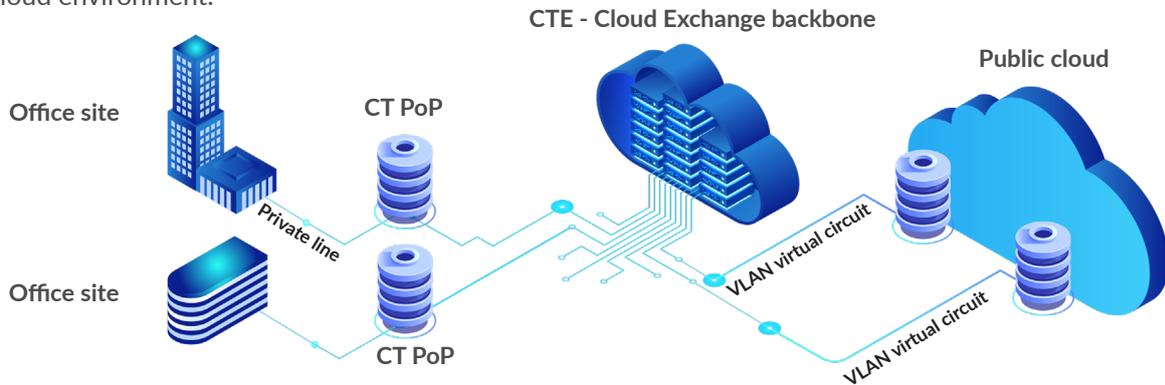

Elastic scalability

Choose a comprehensive solution that responds flexibly to your organisation's needs and connectivity requirements, now and in the future. Our Global Multi-cloud Access service lets you scale bandwidth from 2M to 10G as needed and add VLANs as your requirements change to handle new offices or application workloads.

CTE's Global Multi-cloud Access: General infrastructure

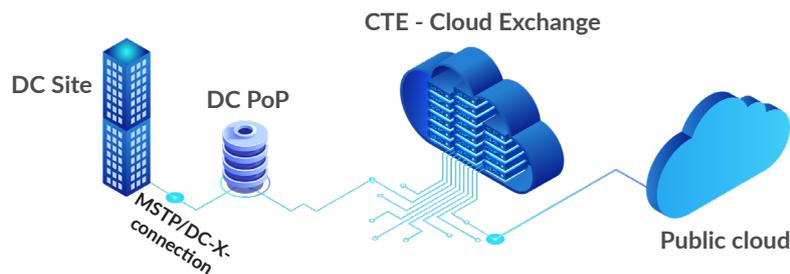

Using the SDN network architecture and China Telecom's self-built basic network, CTE's Global Multi-cloud Access ensures the identification and stability of different user networks 24/7. End-to-end encryption and dedicated connectivity, for data transfer between data centres and private or public clouds, produce a secure hybrid cloud environment.

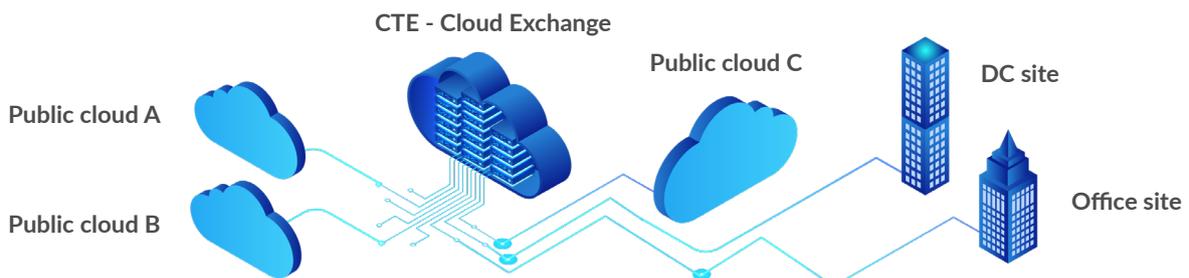

How does CTE's Global Multi-cloud Access work?

Our solution is versatile as an add-on that is compatible and can be bundled with various underlay options provided by CTE, such as P2P Ethernet lines, MPLS VPN or SD-Wan.

Scenario 1: P2P connection from cloud to on-premise customer site

Scenario 2: Multi-site (any to any) elastic connection

100% bespoke connection solutions

When you partner with us, everything we do is geared to the specific needs of your business. You get a tailored Global Multi-cloud Access solution that delivers the performance, flexibility, and capabilities you demand. We can help you:

- With smooth infrastructure upgrading. Activate cloud services on demand with no long lead times or waiting.
- With cost reduction. Eliminate additional hardware investments and reduce ongoing expenses without sacrificing reliable performance and safety.
- With flexible billing. Select short-term contracts or payment models that suit your business.

Who is CTE?

For companies who want to grow their businesses or establish a presence in China, or for Chinese enterprises that wish to expand overseas, CTE provides integrated telecoms and communications services.

CTE is a wholly owned subsidiary of China Telecom Global (CTG), the international arm of China Telecom. CTE's unrivalled knowledge of the Chinese market, and regional offices across Europe, make CTE an ideal partner for European and Asian businesses, including European multinational enterprises, Chinese enterprises in Europe, carriers, telecom service providers as well as Europe-based Chinese consumers.

CTE seamlessly connects your global business to the world's largest single marketplace. Our European-Asia Network has more terrestrial and submarine routes than any of our competitors, and domestically China Telecom owns the largest digital network in China. This results in superior lower latency, greater diversity and improved resilience when accessing business applications to and from China. CTE can bring all your international communications needs under one global contract, and give you the peace of mind that comes from knowing you're in the safe hands of industry experts.
